

The Power Source

A revolutionary power source
that will change the way
you think about energy.

THE AURAGEN

The power source provides 5KW to 8.5KW of power generated by the trucks engine. This allows you to eliminate the diesel motor to turn the compressor. This means you eliminate the fuel cost and maintenance cost associated with diesel refrigeration systems.

OPTIONAL BATTERY BACKUP

Part of the patented technology of this system allows for an option battery back up system. If the driver needs to run the refrigeration system but is in a non-idle situation you can. If the truck breaks down feel safe knowing your cargo remains temperature controlled while you are making arrangements for backup transportation.

SAVINGS

Conservative estimates based on 2,000 hours of use per year will save your company upwards of \$4,500 per year in fuel and maintenance over the first five years of ownership.

RELIABILITY AND WARRANTY TO BACK IT UP

The AuraGen unit carries a five year warranty, unmatched in any transport refrigeration system on the market.

NO CORNERS WERE CUT IN CREATING THIS REVOLUTIONARY PRODUCT

The AuraGen, besides a 150 million dollar investment and over 500 man years of engineering, was also brought to life with over 20 million dollars in tooling and over 4 years of testing and qualifications.

For more information on the AURAGEN, go back to the home page and click on the "PARTNERS" door on the truck. Then click on "Transportation", then "Emerald Commercial Leasing / Sales". Fill out the required information and in the comments section, explain that you want to learn more about the AURAGEN. Click on the "Send" button and an Emerald specialist will contact you.
